Brand **wowtamins**
 Packaging **2x Original, 340 g, 120 Stück**

Remark:

Disclaimer:

Dieser Prüfbericht ist ein Auszug des gesamten Untersuchungsumfangs.
 Es handelt sich um dieselbe Probe wie Auftrags-Nr. 3813765-196016 und 3813801-196089.

Zur Berechnung des Gehaltes an DHA und EPA wurde der auf der Probe deklarierte Gehalt an Algenöl von 185 mg pro 4 Gummies herangezogen.

-----ENGLISH VERSION-----

Disclaimer:

This test report is an excerpt from the full scope of the analysis.
 This is the same sample as order nos. 3813765-196016 and 3813801-196089.

For the calculation of the DHA and EPA content, the declared algae oil content of 185 mg per 4 gummies was used.

x) Single values below the detection or quantification limit were not taken into account.

Explanation: The symbol "<" or n.q. in the result column means, the parameter concerned is not quantifiable at the limit of quantification shown opposite.

Explanation: OM = on original matter; DM = on dry matter base

The calculation of the measurement uncertainties given in the following table is based on the GUM (Guide to the expression of uncertainty in measurement, BIPM, IEC, IFCC, ISO, IUPAC, IUPAP and OIML, 2008) and the Nordtest Report (Handbook for calculation of measurement uncertainty in environmental laboratories (TR 537 (ed. 4) 2017). This is therefore a very reliable value with a 95% confidence level (confidence interval). Deviations from this are indicated as entries in the column "Deviating determination method".

The results are related only to the samples tested. In cases where the laboratory has not been responsible for sampling, the reported results apply to the samples as received. The laboratory is not responsible for the information provided by the customer. The customer information, if any, presented in this test report is not subject to the accreditation of the laboratory and may affect the validity of the test results. Duplication of this document or of parts of it requires the authorization from laboratory.
In conformity assessment, the economic approach is used as the decision rule (a non-conformity exists if the measurement result is included measurement uncertainty above the specification or standard), as long as nothing else has been determined by corresponding legal or normative bases.
