[1)] Reg. (EU) 2023/915: Commission Regulation (EU) 2023/915 of 25 April 2023 on maximum levels for certain contaminants in food, in version currently in force
[2)] Explanation: "<" or "n.q." represent the fact that the concentration of the analyte is below the limit of quantification (LOQ).
[3)] The sign "<"...."(LOD)" or n.d. in column result means, the substance concerned cannot be detected within the limit of detection.
[4)] **Remark to Salmonella spp.:**
In the testing of Salmonella spp. according to ISO 6579-1 Salmonella Typhi and Salmonella Paratyphi are not included. These bacteria/germs are hardly found in food.If on the side of the customer there is a justified case of suspicion these two subspecies can be analysed by a PCR test, which needs to be ordered separately by the customer.In case of positive Salmonella results a confirmation of Salmonella spp. was conducted by MALDI-TOF.
[5)] **Remark to Escherichia coli:**
According to the National Footnote, these are presumptively determined ß-glucuronidase-positive Escherichia coli.
[6)] In the present sample, aluminum was analyzed by acid digestion and ICP-MS. Due to the amphoteric properties of aluminium, it cannot be excluded that underfindings may occur, especially in the case of aluminium of mineral origin.
[7)] **Remark to Staphylococcus, coagulase-positive:**
Results below 150 cfu/g are considered as estimates.
Explanation: Substance: OS=original substance, DS=dry substance

According to the extent of the analysis the sample complies with the requirements of Commission Regulation (EU) 2023/915 of 25 April 2023 on maximum levels for certain contaminants in food, in version currently in force.

The results are related only to the samples tested. In cases where the laboratory has not been responsible for sampling, the reported results apply to the samples as received. The laboratory is not responsible for the information provided by the customer. The customer information, if any, presented in this test report is not subject to the accreditation of the laboratory and may affect the validity of the test results. Duplication of this document or of parts of it requires the authorization from laboratory.

In conformity assessment, the economic approach is applied as the decision rule (a non-conformity exists if the measurement result including measurement uncertainty is above the specification or standard), as long as nothing else has been determined by corresponding legal or normative bases.
